Citations

This is the consolidated list of **reliable and accredited citation sources** for the foundational material augmented and incorporated into the **Unified Cartographic Framework (UCF)** research.

Concept to Cite	Purpose in This Work	Accredited Citation Source (Peer-Reviewed / Institutional)
Birch and Swinnerton-Dyer (BSD) Conjecture	Foundational principle (local-to-global) that serves as the initial axiom for the framework; defines the structure being tested (Files 2, 6, 8).	**Clay Mathematics Institute (CMI): THE BIRCH AND SWINNERTON-DYER CONJECTURE**
Scalar Virial Theorem (Derivation)	Provides the formal derivation of the equation that yields the **Virial Discriminant Imbalance (VDI)** term $\|2T + U\|$	**University of Cambridge**: *Astrophysical Fluid Dynamics Lecture 3: Gravitation (source 2,5)*
Generalized Virial Theorem in Astrophysics	Context for the non-zero imbalance, accounting for surface pressure or non-isolation, which is the physical basis for the VDI feature (Files 13, 14).	**The Astrophysical Journal / Monthly Notices of the Royal Astronomical Society (MNRAS):** Peer-reviewed articles on the application and discrepancies of the Virial Theorem in galaxy clusters.
Planck 2018 Cosmological Parameters	The definitive source for ΛCDM parameters (e.g., $\frac{\Omega_\Lambda}{\Omega_M}$ used to achieve the **Natural Normalization** ($K \approx 1$) (File 10).	**Astronomy & Astrophysics:** *Planck 2018 results. VI. Cosmological parameters* (The official collaboration paper.)
Topological Data Analysis (TDA) / Persistent Homology in LSS	Methodology used to define the topological classes of the cosmic web (clusters, voids, filaments) and the structure for the **ACSC** and **ECC** (ACSC File, File 17).	**Journal of Cosmology and Astroparticle Physics (JCAP) / MNRAS:** Peer-reviewed papers on applying persistent homology (Betti numbers) to N-body simulations of the cosmic web.
Elliptic Curves and Modularity (Langlands Program)	The proven link between elliptic curves and modular forms, which is the core of **First-Principles Validation** against String Theory (File 12).	**Annals of Mathematics / Major Academic Review:** Seminal papers on the **Modularity Theorem** by Wiles, Taylor, or the general **Langlands Program** by a primary contributor.
FLRW Metric and Comoving Coordinates	The geometric foundation used for the **Global-to-Local Paradox Correction Theory** and the	**Academic Textbook:** *Gravitation and Cosmology* by Steven Weinberg or *Modern*
